## **Blue Wave Rigging Hardware**

We have been in business since 1932 with headquarter located in Haderslev, Denmark, Blue Wave A/S is currently in its third generation, as a family owned and lead Manufacturing Company. The Blue Wave crews consist of 60 dedicated and skilled employees, some of them has been with us for more than 20 years.

We are currently among the top three largest manufacturers of high quality stainless steel rigging hardware in the world. Our focus has for years been the Marine, Architectural and Industrial sectors.

In the fifties Blue Wave mainly produced shackles and thimbles, later on came the wire fittings and in the nineties the rod program was introduced. By constant development and investments in high tech production machinery, focus on customer needs and wishes, a well known brand name has been established.

Today Blue Wav's product range covers one of the most extensive ranges of stainless steel wire fittings, ranging from 2mm to 32mm.

Key factor for Blue Wave's future development and production, is a continued development driven by customer demand. Applying efficient production, good design, low weight and optimal strength to its products.

Blue Wave strives to become the number one chosen supplier of rigging hardware.

WIRE ROPE  
WDS TOOLS

For full break load Blue Wave recommends pressing  or swaging/rolling  the terminals onto the wire ropes. Recommended machines for this purpose are e.g. Presses from TALURIT®, roller swaging machines from WIRETEKNIK or combined press and roller swage machines from TOPREFF 2000. Our terminals are however also suitable for rotary hammer pressing!

## Swageless terminals

If the exact length of the final wire is unknown a good solution is only to swage one end and screw  a swageless terminal onto the wire for final attachment on site at the other end.

## Small terminals

Alternatively the WDS range of Small fittings can be crimped  onto the wires using a hand tool, however due to reduced amount of material in the small fittings, only a 50% break load of the wire can be obtained by this method.

## Correct attachment

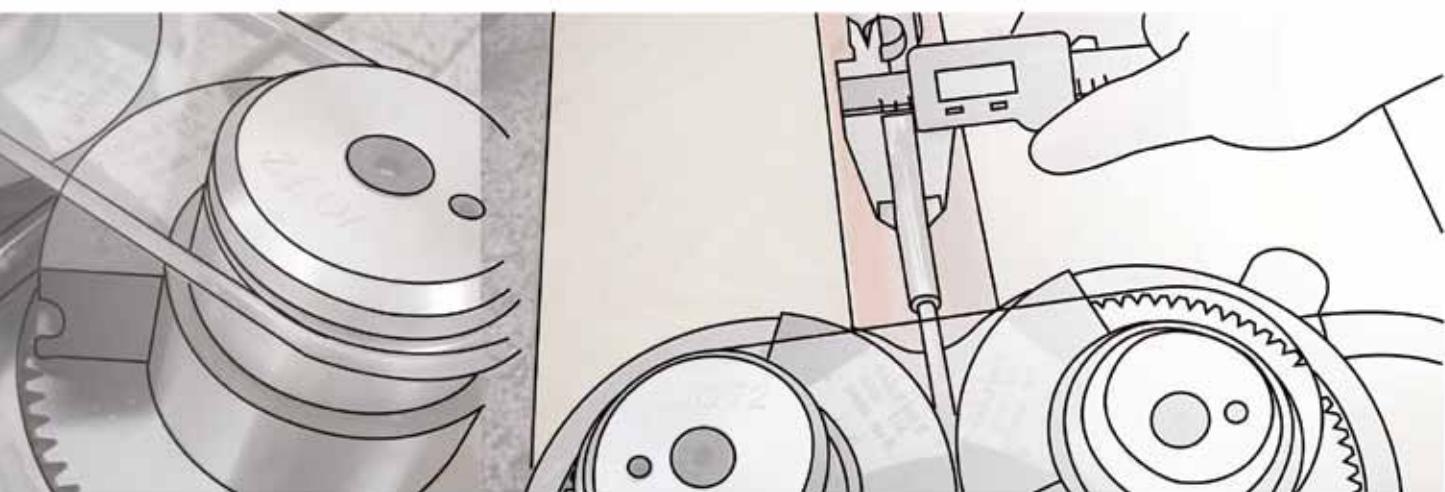

Always use the correct size standard dies recommended by the supplier. As correct wire attachment/termination can only be achieved by firmly squeezing the material of the terminal into the strands of the wire.

Most Blue Wave terminals are marked with wire size and a mark indicating the depth of where to start for correct swaging.

Where markings are not possible e.g. on the small terminals, the wire hole depth must be measured before swaging, not only to find the point to start the swaging , but also to get the right length of the final wire including the fittings. CAUTION, by swaging the terminals onto the wire, the shaft will get a little longer. As a rule of thumb the length will be prolonged by approximately the same amount of mm as the diameter of the wire in mm!

## Facts and information

### - working with wire fittings..

When planning a wire construction the ultimate break load, as well as the work load, must be calculated, as it will determine the minimum wire size and maybe the wire construction needed.

Blue Wave's fitting's, unless otherwise stated, are constructed after termination to meet 90% of the break load on the wire ropes that are standard in the market. PLEASE NOTE : in order to guarantee safety in a wire construction you should calculate a safety factor of 2-3 on static constructions and a minimum of 4 on dynamic constructions. As a general rule working loads should never exceed 25% of the break loads stated in this catalogue.

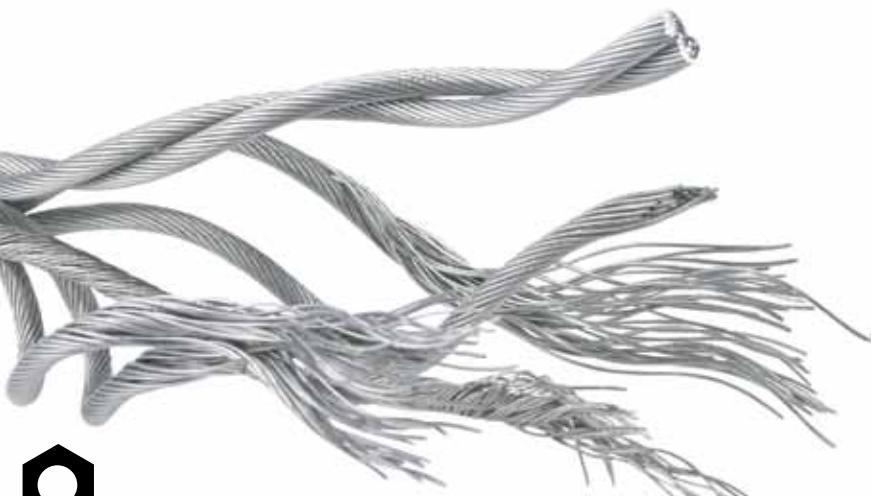

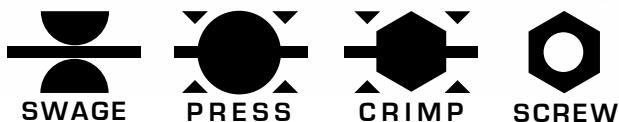

For further details ask your Blue Wave/WDS distributor or contact Blue Wave A/S.

## WDS break loads

## Attaching terminals

Under each scheme in the WDS catalogue you will find indications to the correct attachment.

## Stretch in wire rope

Stretch is the degree of a material to which it is able to be lengthened by pulling.

Stretch is one critical factor to be considered when designing a rig. Low stretch under high loads and other factors are important in the final performance of a rigging configuration.

### Stretch can be of two types:

#### 1. Structural

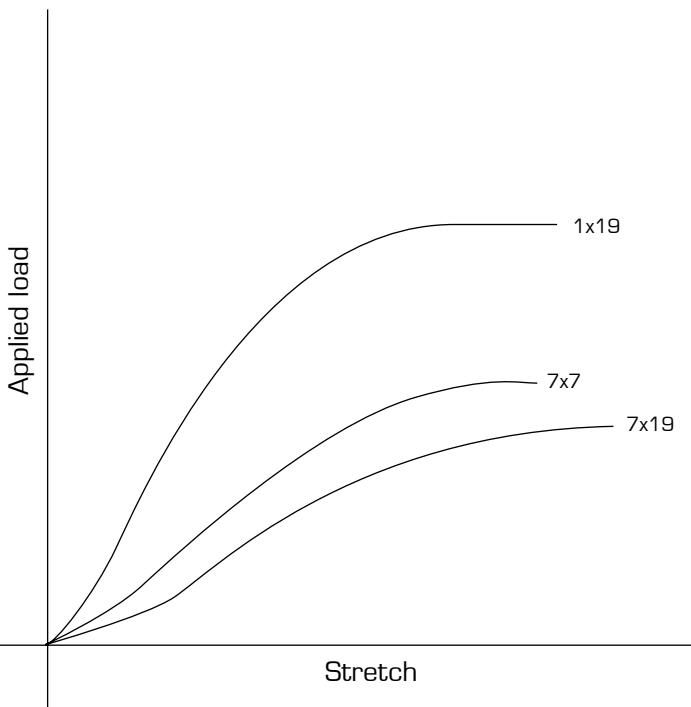

Of a permanent character. Caused when the initial load is applied.

#### 2. Elastic (ES)

Given by the applied load (kN), wire length (m), modulus of elasticity of wire and its cross sectional area  
( diameter<sup>2</sup> x Pi/4 )

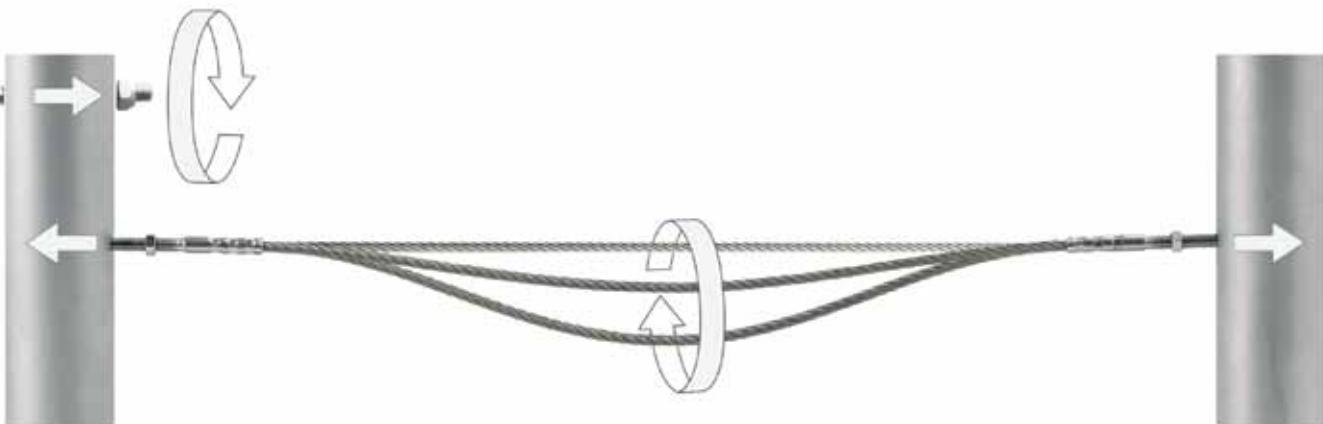

It is possible to calculate this value from the formula:

$$ES = \frac{\text{Applied load (kN)} \times \text{wire length (m)}}{\text{Modulus of elasticity} \times \text{Cross sectional area}}$$

## Tensioning of wire with terminals

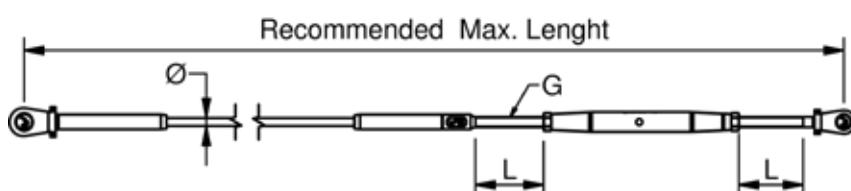

As well as serving as an attachment to a given construction, threaded terminals, once on to the wire, can serve as a tensioner. Where tension cannot be applied to the thread via a nut at the end, the wire can be tensioned by use of e.g. right handed and left handed thread terminals at each end of the wire, by turning the whole wire it will be tensioned.

## Blue Wave High Quality Lubricant

Synthetic oil based Lubricant with PTFE

The Blue Wave Lubricant contains PTFE micro powder, dispersed in synthetic base oil with anti- oxidation additives.

It is high effective lubricant, with long life properties, for use in metal to metal applications. Water repellent, do not soil, resists temperatures between - 50°C and +200°C

Non ageing and has extremely low friction.

Supplied in tube with 50 gr.

The Blue Wave Lubricant is used on the threads improving the performance. Whenever stainless steel threaded parts are screwed together it is always strongly recommended to lubricate the threads first, as this prevents the threads from jamming!

Ask for Blue Wave Part No. BWLUB1

Blue Wave products can be used in temperature range from -40°C to +100°C and briefly up to 200°C

## PREN Pitting Resistance Equivalent

$$\text{PREN} = \% \text{ Cr} + (\% \text{ Mo} \times 3,3) + (\% \text{ N} \times 16)$$

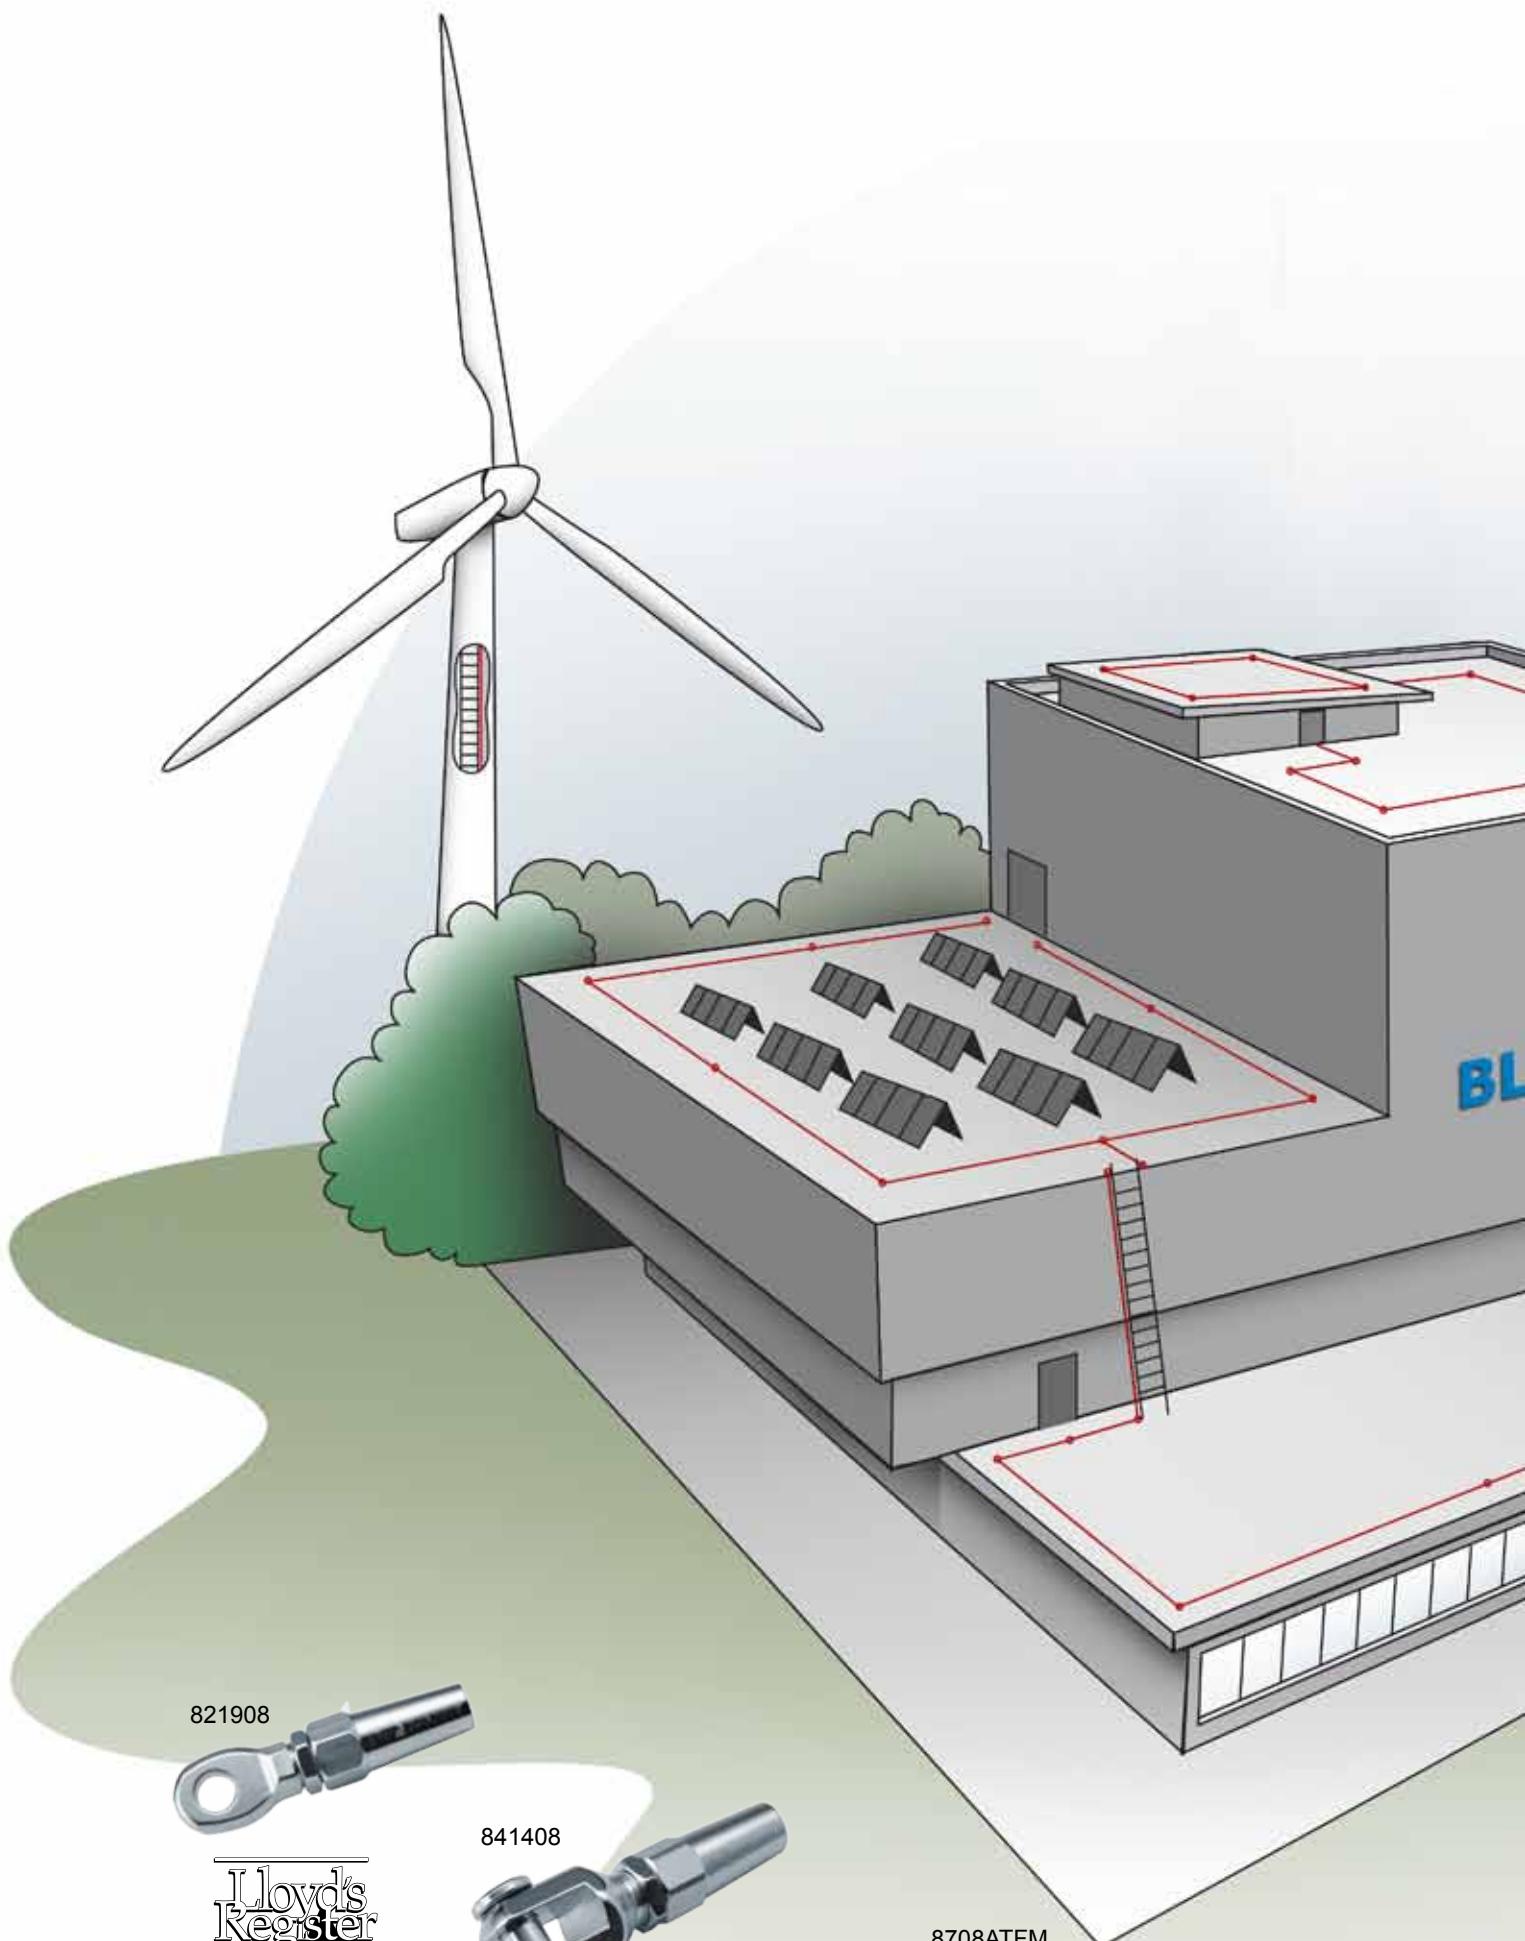

PREN is a guideline formula for calculating the properties of stainless steel and there resist against pitting. You could say that the content of Molybdenum, has 3.3 times as great effect against corrosion, as the content of chrome, and Nitrogen has 16 times. To ensure the right quality of stainless steel, Blue Wave has invested in an X-ray gun for the control of raw materials, to ensure that customers always get the desired quality. Below is a table of the most frequently used types of stainless steel at Blue Wave.

## Fallprotection - and lifeline fittings

The quality as well as the fast and easy assembly of the Blue Wave swageless end fittings has over the years made them a favorite choice when it comes to installation of lifelines. In combination with other Blue Wave products a whole range of stainless steel lifeline fittings with  $1\frac{1}{2}$ " thread for 8 mm wire was designed. The end fittings are suitable for swaging and pressing as well as hand crimping.

Fall Protection and safety specialists can with the Blue Wave fittings design a lifeline system - horizontal or vertical, to accommodate the special characteristics of almost any work space.

**8mm Endfittings and customized products on request.**

Horizontal Lifeline applications where the fittings are used today are e.g. within the construction area, on roof tops, window washing as well as bridge maintenance and on aircraft hangars.

## ASSEMBLE INSTRUCTIONS

1. First slide the jaw housing in place on the cable.
2. Next, slide the jaws onto the cable leaving some space between the jaw sections.
3. Place the brass pressure ring on the end of the cable. Make sure that the distance from the pressure ring to the end of the cable is 5 mm.
4. Slide the jaw housing over the jaws.
5. The terminal can now be assembled. Screw the head firmly to the jaw housing with a spanner.  
Then tighten the lock nut firmly with a spanner.
- 6. When assembling the Swageless Terminal a non-acidic sealing compound must be used in the housing, sikaflex 221, for example.**  
Disassemble the terminal and fill the jaw housing and the cavity with sealing compound, then assemble the terminal. Repeat this until the sealing compound emerges from the hole through which the cable is inserted. Clean the terminal. Do NOT reuse the jaws. Make sure that the dimensions of the terminal and cable match.

## Maintenance

Check the terminal regularly for damage in connection with longer exposure to concentrated saline solutions or polluted surroundings. Check the seal, if it is broken remove all sealing compound. Then rinse the terminal with fresh water and treat it with WD40. Reseal the terminal with non-acidic sealing compound.

## Note

After the first dynamic load the terminal MUST be tightened again. The terminal was developed for use with following types of cable: 1x19, 7x19 and 7x7. The terminal can also be used with Dyform (compacted strand)  
When assembling swageless terminals the breaking strength of the cable used will be reduced by 0-15 %.

The user is responsible for choosing the proper cable diameter and for correct assembly

The wide range of hand welded fork terminals by Blue Wave has been setting standards for many years. Featured here are the most common size / fork variations: - all with wire size and swage depth marking. Fork terminals are amongst the most commonly used wire end fittings, they are normally attached to pre drilled anchor plates or steel constructions. Also used in combination with toggles, eyes or U-bolts.

M20> M36 Available with threaded Bronze inserts in a S/S Body

The Blue Wave stainless steel rigging screws have been setting standards over the last 50 years.

Available with a wide range of end fittings, the most common ones are listed in this catalogue, you can "put together" your own choice of complete rigging screw, as the loose threaded rigging screw parts are all to be found in the WDS catalogue.

Blue Wave rigging screws all feature thread and/or wire size, as well as "easy use" marking for left and right threaded side.

A special Teflon® lubricate is used on the threads improving the performance. Whenever stainless steel threaded parts are screwed together it is always strongly recommended to lubricate the threads first, as this prevents the threads from jamming!

The larger size rigging screws from M20 and up are available with Stainless Steel with bronze threaded inserts for smooth adjustment .

Most rigging screws are also available with open body & UNF thread, on request .

Blue Wave's small fork terminals are for lighter architectural fixing of wires. The focus of the design is the size. Overall dimensions have thus been reduced to a minimum. The small fittings are suitable for hand crimping with Blue Wave Arctool-1ACC & Arctoo8, see page 61, or roll swaged using a standard machine and smaller die.

Note: Threaded Tie Bars in various lengths are available on request

As a alternative to wire systems, tie-bars may be used - especially for static structures such as balcony supports, glassed facade structures etc. Standard components are Adjuster forks and inside threaded connectors for tie-bars. The tie bars are available on request, can be delivered with or without key width as well as a polished or unpolished version. Adjuster eyes can also be delivered on request.

For lengthening the wire, or adding flexibility to installations, the toggles can be applied. Where a structure is subjected to stress the use of a toggle is essential as it can minimise the fatigue risk.

Blue Wave's small Eye terminals are for lighter architectural terminations . The focus of the design is the size.Overall dimensions have thus been reduced to a minimum. The small fittings are suitable for hand crimping with Blue Wave Arctool Acc1 & Arctool8, see page 61, or roll swaged using a standard machine and smaller die.

The wide range of threaded Blue Wave terminals are engraved with wire size and swage depth making them easy to use when pressing or swaging them onto the wire. The terminals are available with left handed or right handed threads, and also, on request, with split pin hole (see details below on this page), or UNF thread! Threaded terminals are used to put tension on a wire, either with the help of nuts and washers or as part of a rigging screw.

Blue Wave's small thread terminals are for lighter architectural fixing of wires. The focus of the design is the size. Overall dimensions have thus been reduced to a minimum. The small fittings are suitable for hand crimping with Blue Wave Arctool1ACC & Arctool8, see page 61, or roll swaged using a standard machine and smaller die.

A640608	M8	6	16	73	12	47	45	600	10,7

The DIY terminal has inside thread - delivered with removable thread pin!

The Do It Yourself terminal is a simple alternative to the Swageless terminals, as it is fixed to the wire only by use of "allen-headed" screws. Break loads are , therefore , lower than average!

The terminals are delivered with external right handed thread stud only, but as this can be removed, they can be combined with the rest of the WDS program and thus offer a wide range of possible DIY solutions. The fittings can be reused and are as such a good solution for private use...

The opposite rigging screw would be a combination of the double threaded pin and inside threaded terminals locked at either side. This is usually used where extra adjustment lengths are needed or when pre-fitted wires are manufactured too short !

The threaded pins are a useful way to solve a problem where the wire may need to be lengthened... connect it to an inside thread wall anchor and use an inside thread terminal or rigging screw body for tensioning.

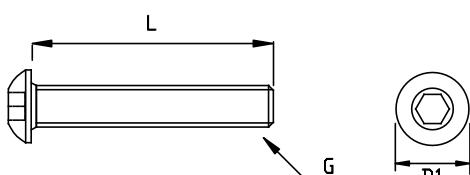

## DOMEHEAD SCREW

Stainless Steel - **AISI 304**

Threaded domehead screws can be used for end termination and adjustment of a wire e.g. combined with inside thread terminals. The ball for domehead is particularly useful for angled installations.

The "one side blank" rigging screw is assembled with a right threaded swageless terminal. It is ideal for site work where a professional swaging would normally be required and the final attachment has not been decided upon, as the choice of fitting for the blank side is optional...

A011210	M10	17	90	3500	7,0
A011212	M12	23	120	5100	11,3

In order to match the small WDS fittings the small bodies have less adjustment, but also feature thread size and, "easy use" marking for left and right threaded side and adjustment hole.

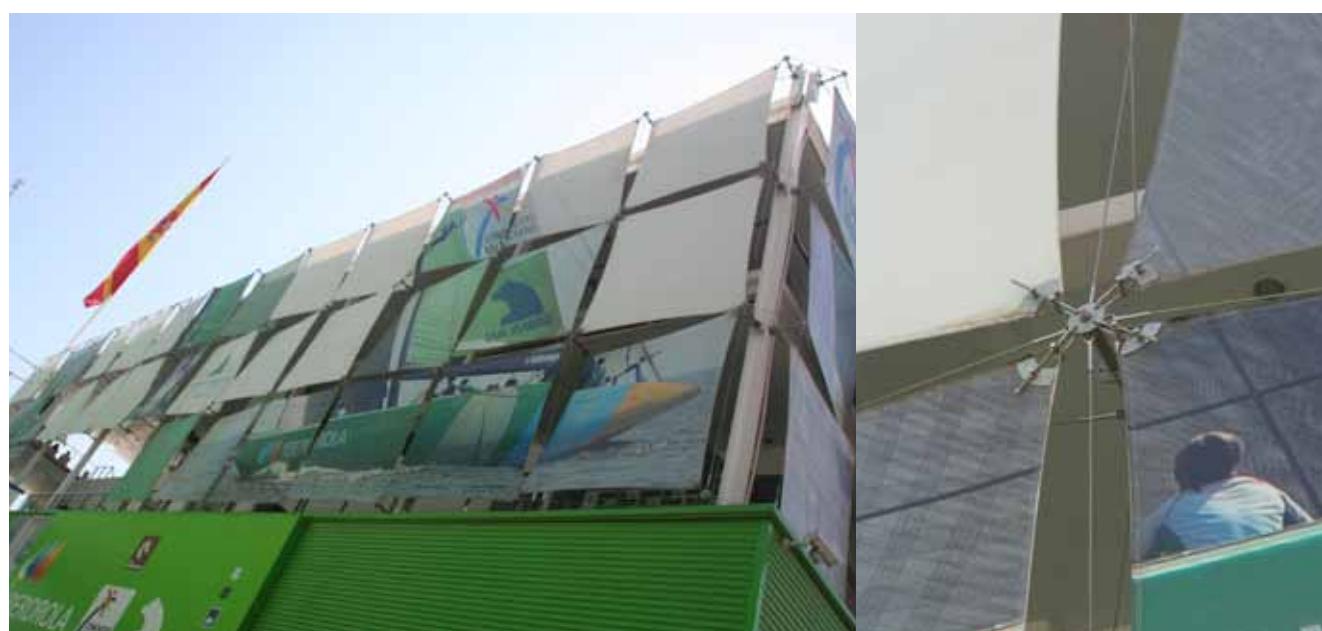

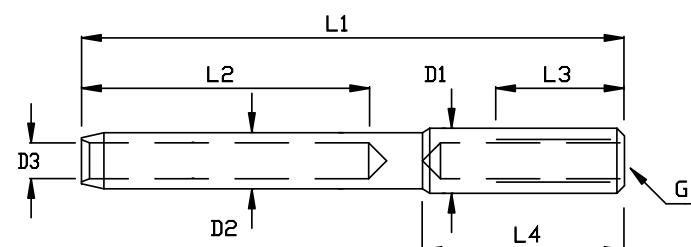

## INSIDE THREAD - SMALL

The small inside thread terminals are for lighter architectural fixing of wires. The terminals are available with left handed and right handed threads, with dimensions reduced to a minimum. These terminals are suitable for hand crimping with Blue Wave Arctool ACC1 & Arctool8, see page 61.

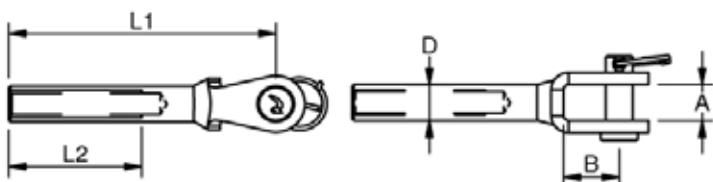

## INSIDE THREAD FORK WELDED - SMALL

For small architectural wires another good alternative to rigging screw adjustment, is the inside thread forks! The forks have a light design, as dimensions are reduced to a minimum - the forks are available with left handed and right handed threads as well as in a welded, and machined version.

## INSIDE THREAD FORK - MACHINED - SMALL

A170806	M8	11.00	14.0	60	55	35	2350	1.0

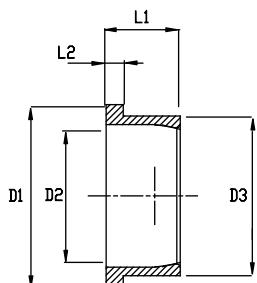

The inside thread dome head is, when combined with a threaded terminal, an ideal end/adjustment fitting for balustrades with through going holes. For 4 mm wire it can also be combined with a ball for dome head terminal, for diagonal or angle tensioning! The Dome head features an Allen key hole and minimum overall dimensions.

## SLEEVE FOR WDS BALL

A232508	6	M8	11	25	36	10	2350	6.8

The ball sleeve is easily mounted on a balustrade. It has an inside radius covering most of the Blue Wave balls in the WDS program.

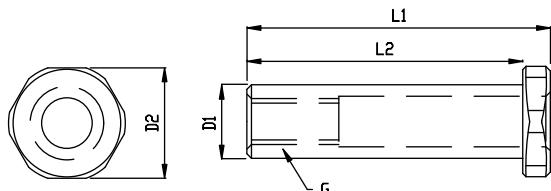

The flexible angle hinge offers an elegant and 100% correct angle to all diagonal tensioned wires from 3 - 6 mm. To adjustment there is a right handed thread inside the shaft.

## STOP END NUT

Stainless Steel - AISI 316

ART.NO.	G	D1	D2	L1	L2	BL	KG/100

A161008	M10	13	17	50	45	3500	2.50

The stop end nut allows for a small amount of adjustment and is a nice end piece to the terminal fitted wire.

Often found to be a good alternative to a standard rigging screw are the inside thread terminals. The terminals are available with right handed threads and left handed on request! For ease of use when pressing or swageing onto the wire, the terminals are marked with wire size and swage depth.

incl. Double headed Clevis Pins

Use max. M5 thread terminals for 3 mm wire

The Y-system offers a number of options - developed as a solid curtain wire base the Y anchors support loads up to 500 kg. and can be used with 2 , 2.5 and 3 mm wire/ M5 thread.

The pin gives flexibility to the system and allows the wires to be fitted at various angles, but can , on longer expansions, also be used as a simple wire support.

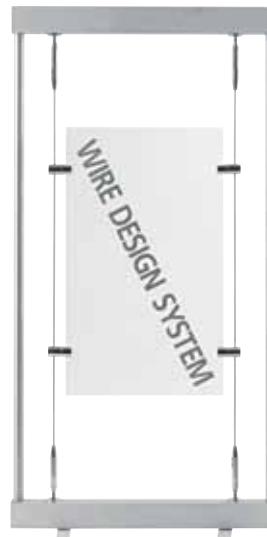

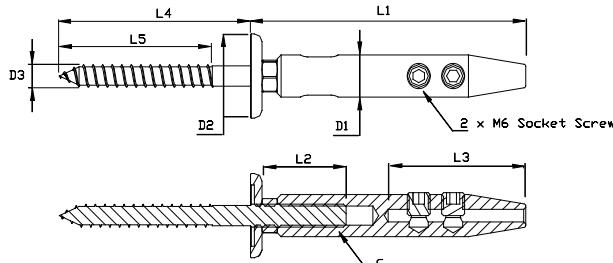

## DIY SIGN ADJUSTER TERMINAL

Note: All breakloads are determined by wedges (jaws) and thread

Assemble instruction look at page 15

The easy attached dual/inside thread, is a part of the fastest swageless wire system available.

The swageless terminal is easy to use and ideal for site work where a professional swaging tool would normally be required. The inside threaded swageless terminal guarantees at least 85% break load on the wire.

## SWAGELESS INSIDE THREAD TERMINAL
